

TAPS™ ODOR CONTROL MANHOLE INSERTS

HERE'S HOW THEY WORK:

A Taps™ Insert (shallow plastic basket about 4" deep) is hung from the manhole frame rim. It has holes in the bottom which are covered by a sturdy plastic screen. Taps™ Oxidizing Granules are poured on top of the screen. The system allows generous venting. H₂S is chemically changed to a salt as it vents through the media bed.

Taps™ Inserts are made of tough, rigid ABS plastic, which will not corrode and requires no maintenance. They have two nylon lifting straps for easy removal.

SUMMARY OF ADVANTAGES:

- Superior odor control
- Constant venting of line pressure
- Minutes to install
- No maintenance, no corrosion
- Affordable

INSTALLATION IS AS EASY AS...

- 1.** Remove manhole cover and clean rim

- 2.** Place insert on frame rim

- 3.** Add granules and replace cover

Taps™ Oxidizing Granules are packaged in 3 1/2 gallon pails (0.5ft³), which weigh approximately 25 lbs. For more information on our Oxidizing Granules please review our [MSDS/Granules](#) section.
